In both case you could choose an additional fabrics from this manufacturer. Please contact us for a new offer!

RACE SUIT FABRIC

These highly elastic knit fabric are not as abrasion resistant as woven fabrics. Contact with abrasive surfaces such as Velcro should be avoided.

Some prints on fabric are always done on a white base. The print only penetrates the surface and some underlying white may show through in areas of extreme stretch.

Wear and Tear is normal in stretch fabrics and may include pilling, snagging cuts from edges and fabric burns from hitting gates at high speeds.

THESE PHENOMENA ARE NORMAL AT ANY USE OF POLYESTER MATERIALS SO THAT THE AFOREMENTIONED INJURIES CAN NOT BE THE REASON OF A CLAIM.

We are introducing the finest suits made of the **ESCHLER SCHOELLER e3** fabric, produced by a recognized Swiss manufacturer of technical fabrics that also holds concession for the acquisition of FIS licenses. The fabric is manufactured on the principle of double-layered special laminate, with a middle layer of liquid acrylic foam. The following are the most salient superior characteristics of the **ESCHLER SCHOELLER e3** fabric

- Excellent body fit due to elastic fibres
- Freedom of movement
- High insulation value
- High aeration value (breathability)
- Water-repellent (Teflon-covered textiles)
- Wind resistance protection
- Easy care

Our suits are fully padded and protected in the most exposed areas with 6 and 8 mm thick rubber foam and are intended for young competitors and first class amateurs who wish to achieve top-notch results. Special technology makes it possible for us to offer you the possibility of designing suits bearing the colours of your club and also the logos of your club or sponsors, or even to customize them according to your wishes, taking into account, of course, technological solutions.

The exporter of the product covered by this document declares that, except where otherwise clearly indicated, these products are of EU preferential origin.
